

DAN LANDRY D.D. DENTURE CLINIC

Increasing Your Confidence and Quality of Life with Implant Supported Dentures

Are you ready to take a bite out of life? Be healthy? Eat the foods you crave? Look years younger? Get compliments on your amazing smile?

Having the right dentures can do all of this for you. At the Dan Landry Denture Clinic, denturist Dan Landry and his team work to create the perfect fit and look. What does this involve? It requires an accurate print of your teeth or gums and a skilled hand to fabricate dentures providing the best alignment and natural appearance.

“A denture that moves around in your mouth doesn’t allow you to talk properly and certainly limits what you can eat,” says Dan. “With implants, your denture will remain in place when you’re speaking and chewing your food.”

The implants are surgically placed in the upper or lower jaw and normally integrate with the bone after two to three months. “Once your gums are healed and the denture is secured to the implants, your quality of life improves,” Dan assures. Patients with implant supported dentures enjoy a wider variety of foods to eat which, in turn, leads to healthier diets and greater choice at restaurants. Feeling more confident and content, patients find themselves smiling frequently with their beautiful new teeth!

Different levels of comfort are possible with implants. Two implants on the lower jaw improves chewing significantly, close to 60% compared to conventional dentures. Three implants achieve 70% and four or more 80 to 90%. “For the upper jaw, you need a minimum of four implants, depending on the quantity and quality of the bone; anything less can lead to failure of the implants,” Dan

explains. “With an upper implant supported denture, you can usually remove a portion of the denture palate, heightening your ability to taste food.”

“In the last 40 years, our office has seen many different kinds of implant systems; they all worked to a degree and helped to keep the dentures in place, some better than others,” Dan reflects. “I was fortunate to work alongside my father in law, John Gecelovsky, the first licensed denturist in Essex County. He passed on his knowledge of different systems and made me a better technician and denturist.”

“Technology improves all the time and we are dedicated to providing the latest implant system for our patients’ benefit. Whether you want a denture that is supported by removable or fixed implants, we guarantee you will love your new teeth!”

After patients wear dentures for a few years and then decide to get implant dentures, their most common remark is: “Why did I wait this long to get my new teeth? I feel terrific!”

With offices in Windsor, Belle River and Essex, the Dan Landry Denture Clinic collaborates with dentists at all three sites for patients’ optimal oral health. Valuing long lasting patient relationships as far back as the 1970s, Dan notes, “some patients are now on their third or fourth set of teeth. It’s a great feeling when your patients return year after year. It’s an indication of mutual trust and respect.”

Taking the first step toward changing your life with implant supported dentures is simple. “Come in for a FREE consultation and ask all the questions you want,” Dan invites. “Together, we will make an informed decision that is right for you.”
